SYNTHETIC TEST DOCUMENT - FICTIONAL PATIENT - NOT REAL MEDICAL DATA

LAKESIDE DIGESTIVE HEALTH - UPPER ENDOSCOPY (EGD) REPORT
Patient: Dana Whitfield DOB: 03/12/1984
Date of procedure: 09/02/2026 Endoscopist: Marcus Feld, MD

INDICATIONS
Iron-deficiency anemia, positive fecal immunochemical test, 3 months of upper abdominal discomfort and bloating, daily ibuprofen use for headaches, positive H. pylori stool antigen.

FINDINGS
Esophagus: normal.
Stomach: patchy redness of the antrum with 5 to 6 small superficial erosions. One 6 mm clean-based ulcer in the antrum with no active bleeding and no visible vessel.
Duodenum: normal to the second portion.

BIOPSIES
Gastric antrum and body (H. pylori, histology). Ulcer margin sampled per standard practice. Duodenal biopsies to exclude celiac disease.
Pathology: PENDING at the time of this report.

IMPRESSION
Antral erosions and a small clean-based gastric ulcer, most likely related to NSAID use and/or H. pylori infection.

RECOMMENDATIONS
1. Avoid ibuprofen and other NSAIDs.
2. Omeprazole 40 mg daily before breakfast for 8 weeks.
3. Treat H. pylori once pathology is back.
4. Colonoscopy recommended to complete the evaluation of iron deficiency and the positive FIT (not yet scheduled).
5. Clinic follow-up to review pathology in 2 to 3 weeks.
